Profile

Aspiring **DevOps and Cloud Engineer** with practical experience in Docker, Kubernetes, Git, GitOps workflows with ArgoCD, CI/CD pipelines, and AWS cloud services through academic projects and professional training at the Digital Egypt Pioneers Initiative (DEPI). Skilled in building and deploying cloud-native applications, automating development workflows, and managing scalable containerized environments. Passionate about modern DevOps practices and delivering reliable, efficient, and scalable software systems.

Education

Egypt University of Informatics

B.Sc. in Computer Engineering | CGPA: 3.98/4.00

Oct 2023 – Present

Cairo, Egypt

Purdue University

ECE 30100: Signals and Systems | Grade: A+

Jun 2025 – Sep 2025

Online Coursework

Experience

Digital Egypt Pioneers Initiative (DEPI)

Nov 2025 – Jun 2026

DevOps Intern

Remote

- Practiced Infrastructure as Code principles by writing and iterating on **Terraform** modules and **Ansible** playbooks, learning to manage idempotent configurations, role dependencies, and multi-node provisioning workflows.
- Deepened understanding of container orchestration by operating a live **Kubernetes** cluster – troubleshooting node failures, diagnosing **DNS** resolution issues, and recovering from control-plane misconfigurations under real conditions.
- Learned **GitOps** delivery patterns and **Helm** chart design by iterating on application packaging, managing sync policies in **Argo CD**, and implementing hook-based automation to handle stateful workload initialization.
- Built DevOps toolchain experience across the full stack – configuring **SonarQube** quality gates, **Trivy** vulnerability scanning, **Sealed Secrets** for secrets management, and **Prometheus/Grafana/Loki** for observability.

National Telecommunication Institute (NTI)

Jul 2025 – Aug 2025

Cloud Architect Intern

Remote

- Completed AWS Academy Cloud Foundations, mastering core cloud concepts and AWS architectural best practices.
- Operated and configured core AWS services – EC2, S3, IAM, and VPC – to deploy and secure cloud-based environments.

National Telecommunication Institute (NTI)

Aug 2024 – Sep 2024

Network Essentials Intern

Remote

- Mastered foundational networking concepts including IP addressing, routing protocols, and switching through structured training.
- Executed multiple hands-on labs using packet tracing tools, configuring and troubleshooting IP addressing, routing, and switching scenarios.

Certifications

AWS Certified Cloud Practitioner (CLF-C02) | Amazon Web Services

May 2026 – May 2029

- Demonstrated foundational knowledge of AWS cloud concepts, core services (EC2, S3, IAM, VPC, RDS), cloud security, pricing models, and the shared responsibility model.

Projects

End-to-End DevOps Pipeline | Terraform, Ansible, Jenkins, Argo CD, Kubernetes, Helm

Apr 2025 – Jun 2026

- Built and containerized a **MERN** stack e-commerce application with **Docker**, structured across dedicated Kubernetes namespaces with independent scaling via **HPA**.
- Provisioned AWS infrastructure with **Terraform** and automated a self-managed **Kubernetes** cluster using **Ansible** roles; built **Jenkins** CI pipelines with **SonarQube** quality gates and **Trivy** scanning before every image push.
- Implemented **GitOps** delivery via **Argo CD** and a **Helm** umbrella chart, enabling automatic cluster reconciliation on every Git push with a PostSync hook for zero-touch MongoDB replica-set initialization.
- Deployed a full observability stack (**Prometheus**, **Grafana**, **Loki**) and secured all credentials with **Sealed Secrets**, achieving end-to-end cluster visibility and encrypted secrets management.

AI-Powered FIFA Career Assistant | Python, Machine Learning, Data Science, Scikit-learn

Apr 2026 – May 2026

- Engineered an AI-powered assistant for FIFA Career Mode, applying machine learning models to support data-driven club management decisions.
- Designed and built systems for player evaluation, transfer analysis, squad planning, and match outcome simulation using Python-based ML workflows.
- Executed data preprocessing, feature engineering, and predictive modeling pipelines using Pandas, NumPy, Matplotlib, and Scikit-learn.

Warsha Hub | *Python, PySide6, ML, SQLite*

Dec 2025 – Jan 2026

- Architected an educational social platform integrating **graph algorithms** and **ML-based follow recommendations** with an interactive GUI.
- Implemented **personalized feed ranking**, optimized username search, and KNN-based follow prediction to enhance user experience.
- Structured a **SQLite3** database, modular Python backend, and **PySide6** frontend with social graph visualization to deliver a full-stack application.

My Own Shell | *C, Linux*

Aug 2025 – Sep 2025

- Engineered a suite of custom Linux command-line utilities and progressive shell implementations in C, mastering system calls, process management, and low-level OS fundamentals.

Technical Skills

Languages: Python, C++, C, SQL, SQLite, Shell Scripting

Machine Learning / Data Science: Scikit-learn, TensorFlow, Pandas, NumPy, Matplotlib

Tools / Technologies: Git, GitHub, Linux, Docker, Kubernetes, Helm, ArgoCD, AWS Cloud, Ansible, CI/CD with Jenkins, Terraform

Leadership & Extracurricular Activities

IEEE – Institute of Electrical and Electronics Engineers

Dec 2024 – Present

Secretary, IEEE Computer Society, EUI Student Branch

Egypt University of Informatics

- Spearheaded the planning and coordination of technical events, workshops, and hackathons reaching 100+ students, promoting cloud and DevOps awareness across campus.
- Produced meeting documentation, drafted reports, and maintained communication channels between student members and faculty advisors to ensure organizational continuity.
